SCANNERS

BYTE accept scans from all major intraoral scanners. The main scanners that BYTE work with are iTero, 3Shape's TRIOS, and now the TRIOS Colour! The TRIOS Colour ensures a perfect colour match. Working with intraoral scanners means that with the BYTE lab you will experience a smooth workflow with a model-less system.

SCANNER HIRE SERVICE

Looking to go digital without having to buy an intraoral scanner?

BYTE offers a wide range of packages to clients looking to step into the digital workflow without the need for large upfront investment. We also offer full training and more importantly, ongoing support technical support and back up over and above that offered by the main suppliers. With BYTE Membership, you will get free software and hardware upgrades, with no subscription fees!

TEAM PROFILE: ANDREW LENDEN - LAB MANAGER AND TECHNICIAN

Andrew joined the team here at BYTE as our Lab Manager in May 2018. Andrew's first job in the dental world was in the Wirral as an apprentice dental technician aged 16, where he enjoyed the fusion between the creative and engineering aspects of the work. He has since worked in laboratories across the North West of England and North Wales, and since the mid 1990s he has focused on implant work. Andrew was keen to work for BYTE as he liked our forward thinking, digitally focused approach. He also liked the small lab team, committed to producing beautiful, quality, cost effective restorations, using both traditional and digital techniques. BYTE is the best solution for your patients!

PRODUCT SPOTLIGHT - FULL FORM MODEL-LESS CROWNS FROM INTRAORAL SCANS

BYTE have been producing full form crowns from intraoral scans for 3 years now, meaning we have invaluable experience in this area. Taken from intraoral scans, the crowns are then designed on 3Shape and Exocad software. BYTE focus on toothborne and implant work. The digital workflow means that transportation is simpler and halved in cost versus using rubber impressions. BYTE offer full form crowns in the following materials: Emax; translucent Zirconia; full gold; full non precious; resin materials.
